# PUBLIC HEALTH REPORTS

VOL. XXV.

JUNE 3, 1910.

No. 21.

## THE THEORY OF THE PARASITIC ORIGIN OF PELLAGRA.

By C. H. LAVINDER, Passed Assistant Surgeon, United States Public Health and Marine-Hospital Service.

My experience and observations regarding pellagra in Italy have thus far served to make evident one fact. While of course the great majority of the Italian medical world hold the view that there is some important, if not well understood, etiological relation between pellagra and the use of spoiled corn as an article of diet, there are nevertheless at least some students of the disease who have begun seriously to question such an etiological relation. And this has resulted, it seems to me, in a perceptible tendency, more or less strong among certain students of pellagra, to disregard corn entirely as an etiological factor in this disease and to seek some new idea to explain its occurrence. This tendency is in the direction of some protozoal or animal parasite and has been, in all likelihood, produced and stimulated by the ideas of Sambon, first expressed in 1905 at the meeting of the British Medical Association, when he stated that he believed the disease to be caused by a protozoal parasite, probably transmitted by some blood-sucking insect.

Recently there has been formed, as announced in the medical press, a British commission for the study of pellagra, and Sambon has been sent to Italy to try to establish his views on the etiology of the disease.

Sambon's theory has been worked out much more in detail than when first presented, in 1905, and has attracted much serious attention. I have learned personally from him that so far his work in Italy, largely of an epidemiological nature, has greatly strengthened him in his belief in the accuracy of his theory and that he feels confident of its ultimate proof.

### SAMBON'S THEORY.

Succinctly expressed, this theory in its main features is as follows, the details having been kindly furnished me by Doctor Sambon:

Pellagra is not due to maize, either good or bad, because—

1. It is found in places where maize is neither cultivated nor eaten.
2. It is absent from many places where maize is the staple food of the population.
3. It has in many places either decreased or become more prevalent without any change in the food of the people.
4. Its constant and peculiar distribution does not agree with the very irregular and ever-changing distribution of spoiled maize.

5. In over a century and a half, since the maize theory was first suggested, no one has been able to prove it.

The belief that the disease has everywhere followed the introduction of corn cultivation is unfounded. Pellagra was first recognized as a specific disease in the beginning of the eighteenth century, but this does not prove that it was not prevalent long before that time.

Pellagra is a parasitic disease because:

1. For years the person affected may present some seasonal recurrences, which can only be explained by a parasitic agent with alternating periods of activity and latency.

2. It shows a constant and characteristic topographic distribution.

3. It shows a definite seasonal incidence.

4. Its symptoms, course, duration, morbid anatomy, as well as its therapy, are similar to those of parasitic diseases.

5. Of two places, almost contiguous, one may be affected, the other not.

Pellagra is an insect-borne disease because:

1. It is limited, like malaria, sleeping sickness, etc., to rural places and more especially to the vicinity of certain water bodies.

2. It has a definite seasonal incidence—spring and autumn.

3. It affects, to a large extent, a certain class of people—the field laborers.

4. It is not contagious and neither food nor water can account for its peculiar epidemiology.

5. Within its endemic centers it affects all ages and frequently whole families.

6. Outside its endemic centers only adults who have visited the infection areas present the disease and frequently only one or two members in a family are affected.

Pellagra is conveyed by *Simulium reptans* because:

1. *Simulium* is found in the torrents and swift running streams of all pellagra districts.

2. *Simulium* has the peculiar seasonal distribution of pellagra (spring and autumn).

3. *Simulium* is found only in rural districts. It is unknown in towns and villages. It does not enter houses.

4. *Simulium* explains most admirably the peculiar limitation of the disease to field laborers.

5. *Simulium* is the only blood-sucking insect which the British field commission has found in its visits to numerous pellagrous districts in Italy.

6. *Simulium reptans*, like *Anopheles maculipennis*, has a world-wide distribution and explains the wide distribution of pellagra. It is found wherever pellagra is found.

7. *Simulium* causes epizootics in animals in America and in Europe.

8. Professor Mesnil has found a protozoal organism in *simulium*.

#### ATTITUDE IN AMERICA.

The judicial mental attitude which American investigators have so far shown with regard to the etiology of pellagra is certainly to be commended in the present unsatisfactory status of this question. The etiology of pellagra is still an open question. The belief that the disease bears some relation to spoiled corn has so dominated the

etiological field and has received the support of so many men of wide experience that it can not be now entirely disregarded; but certainly it need not be accepted with so complete a dogmatism as to prevent investigation along other suggestive lines.

The theory of Sambon has interested me greatly, and it seems that now, when this theory has been elaborated so much more in detail, it is well worthy of serious attention at the hands of American students and investigators.

#### FLEAS COLLECTED FROM SQUIRRELS FROM VARIOUS PARTS OF CALIFORNIA.

By GEORGE W. MCCOY, Passed Assistant Surgeon, and MAURICE B. MITZMAIN, Assistant, Plague Laboratory, United States Public Health and Marine-Hospital Service.

During the past few months ground squirrels (*Citellus beecheyi*) have been received at the plague laboratory at San Francisco from 17 counties in California. The majority of these squirrels had been shot by the employees of the service, but a few had been trapped and sent in alive. As the majority of fleas desert the host when the body becomes cold after death, comparatively few fleas were present upon the dead hosts. The examination of the squirrels for fleas is a matter requiring so much time and labor that only a small number of the rodents were combed.

The only host considered here is the California ground squirrel (*Citellus beecheyi*), but some of the squirrels were members of two varieties (<sup>a</sup>) of the species, *Citellus beecheyi douglasi* from Solano County, and *Citellus beecheyi fisheri* from some of the southern counties. These varieties differ chiefly from the type species *Citellus beecheyi* in the color markings of the pelage.

We would call attention to the fact that *Argopsylla gallinacea* (Westw.) End. is here reported for the first time from the California ground squirrel. This flea, which occurs rarely on the rat in California, is the normal parasite of the domestic fowl. It is fair to assume that the squirrels from which these fleas were removed were associated directly or remotely with chicken yards. The *A. gallinacea* was found on several of the squirrels in great numbers, and strange to say, was always found on the head, especially in the region of the mouth and eyes.

We take occasion also to call attention to the presence of *Ctenopsyllus musculi* (Duges) Wag. on the ground squirrel. This is the blind flea of the mouse and rat. It has heretofore been recorded from the squirrel under conditions of experimental transference from rats to squirrels, but we have here the first record of the occurrence of *Ct. musculi* in nature. It was obtained from two counties.

*Hoplopsyllus affinis* Baker and *Spilopsyllus inaequalis* Baker are rabbit fleas and their accidental presence on ground squirrels is easily accounted for.

It will be noted that *Ceratophyllus acutus* Baker predominates on the squirrels from every county. It has been previously shown, experimentally, that this flea is capable of transferring plague from one squirrel to another.

<sup>a</sup> We are indebted to Prof. Joseph Grinnell, of the Department of Mammalogy of the University of California, at Berkeley, for the identification of these varieties.

*Fleas collected from live squirrels.*

*Enumeration of fleas from dead squirrels.*

# UNITED STATES.

REPORTS TO THE SURGEON-GENERAL, PUBLIC HEALTH AND MARINE-HOSPITAL SERVICE.

## PLAQUE-PREVENTION WORK.

Passed Assistant Surgeon McCoy reports:

### SAN FRANCISCO, CAL.

Last case of human plague sickened January 30, 1908. Last case of rodent plague trapped October 23, 1908. Total number of rats found infected to date, 398.

Week ended May 14, 1910. Premises inspected, 6,468. Houses destroyed, 11. Buildings condemned, 4. Nuisances abated, 136. Poisons placed, 7,700. Rats trapped, 2,229. Rats found dead, 36. Gophers trapped, 6. Rats identified, 2,265, as follows: *Mus norvegicus*, 1,810; *Mus rattus*, 83; *Mus musculus*, 296; *Mus alexandrinus*, 76. Average number of traps set daily, 7,581. Rats examined bacteriologically, 1,651. No plague-infected rats found.

### BERKELEY, CAL.

There is no record of rodent plague in Berkeley. The last case of human plague sickened August 28, 1907.

Week ended May 14, 1910. Rats trapped, 3. Rats identified, 3, all being *Mus norvegicus*. Rats examined bacteriologically, 3. No plague infection found.

### OAKLAND, CAL.

Last case of human plague sickened October 26, 1909. Last case of rodent plague found December 1, 1908.

Week ended May 14, 1910. Rats found dead, 37. Rats trapped, 529. Rats identified, 566, as follows: *Mus norvegicus*, 479; *Mus musculus*, 87. Rats examined bacteriologically, 479. No plague-infected rats found.

### ALAMEDA COUNTY, CAL. (Exclusive of the city of Oakland).

Last case of human plague sickened 2 miles southwest of Sunol September 26, 1909. Last case of rodent plague found March 25, 1910. To the present time 76 ground squirrels and 1 wood rat have been found infected.

Week ended May 14, 1910. Ranches inspected, 5. Ground squirrels shot, 41. Rabbits shot, 11. Acres covered with poison, 59. Examined bacteriologically, 41 ground squirrels and 11 rabbits. No plague infection found.

**MONTEREY COUNTY, CAL.**

There is no record of human or rodent plague in Monterey County.

Week ended May 14, 1910. Ranches inspected, 18. Ground squirrels shot, 1,070; found dead, 1. Ground squirrels examined bacteriologically, 1,068. No plague-infected squirrels found.

**SAN BENITO COUNTY, CAL.**

There is no record of human plague in San Benito County. A plague-infected rodent was found October 15, 1909.

Week ended May 14, 1910. Ranches inspected, 7. Ground squirrels shot, 292. Ground squirrels examined bacteriologically, 292. No plague-infected squirrels found.

**SAN JOAQUIN COUNTY, CAL.**

There is no record of human or rodent plague in San Joaquin County.

Week ended May 14, 1910. Ranches inspected, 7. Ground squirrels shot, 567; found dead, 4. Ground squirrels examined bacteriologically, 570. No plague-infected squirrels found.

**SAN LUIS OBISPO COUNTY, CAL.**

There is no record of human plague in San Luis Obispo County. A plague-infected rodent was found January 29, 1910.

Week ended May 14, 1910. Ranches inspected, 4. Ground squirrels shot, 226. Ground squirrels examined bacteriologically, 223. No plague-infected squirrels found.

**SAN MATEO COUNTY, CAL.**

There is no record of human or rodent plague in San Mateo County.

Week ended May 14, 1910. Ranches inspected, 7. Ground squirrels shot, 187. Ground squirrels examined bacteriologically, 181. No plague-infected squirrels found.

**SANTA BARBARA COUNTY, CAL.**

There is no record of human or rodent plague in Santa Barbara County.

Week ended May 14, 1910. Ranches inspected, 2. Ground squirrels shot, 313; found dead, 2. Ground squirrels examined bacteriologically, 308. No plague-infected squirrels found.

**SANTA CLARA COUNTY, CAL.**

There is no record of human plague in Santa Clara County. A plague-infected rodent was found November 3, 1909. Total number of ground squirrels found infected to date, 9.

Week ended May 14, 1910. Ranches inspected, 6. Ground squirrels, shot 190. Ground squirrels examined bacteriologically, 189. No plague-infected squirrels found.

**SANTA CRUZ COUNTY, CAL.**

There is no record of human plague in Santa Cruz County. A plague-infected squirrel was found November 6, 1909.

Week ended May 14, 1910. Ranches inspected, 10. Ground squirrels shot, 121. Ground squirrels examined bacteriologically, 117. No plague-infected squirrels found.

**STANISLAUS COUNTY, CAL.**

There is no record of human or rodent plague in Stanislaus County.

Week ended May 14, 1910. Ranches inspected, 10. Ground squirrels shot, 431. Ground squirrels examined bacteriologically, 419. No plague-infected squirrels found.

Assistant Surgeon Chapin reports:

**SEATTLE, WASH.**

No case of human plague since October 30, 1907. The last plague-infected rat was found February 8, 1910. Total plague-infected rats to date, 22.

Week ended May 14, 1910. Rats received, 945. Rats necropsied, 793. No plague-infected rats found.

## STATISTICAL REPORTS OF MORBIDITY AND MORTALITY, STATES AND CITIES OF THE UNITED STATES (untabulated).

**CALIFORNIA—Sacramento.**—Month of April, 1910. Population, 55,000. Total number of deaths from all causes, 47, including tuberculosis 4. Cases reported: Typhoid fever 1, measles 20, scarlet fever 1, diphtheria 10, tuberculosis 3.

**FLORIDA.**—Week ended May 14, 1910. Reports from the state board of health show typhoid fever present in 3 localities with 13 cases, smallpox in 3 counties with 14 cases, diphtheria in 2 localities with 2 cases, and tuberculosis in 4 localities with 9 cases.

**IOWA.**—Month of March, 1910. Population, 2,192,608. Total number of deaths from all causes, 1,959, including typhoid fever 22, measles 7, scarlet fever 15, diphtheria 16, tuberculosis 114.

Month of April, 1910. Total number of deaths from all causes, 1,639, including typhoid fever 23, measles 13, scarlet fever 7, diphtheria 21, tuberculosis 127.

**NEW YORK.**—Month of March, 1910. Population, 8,871,720. Total number of deaths from all causes, 14,134, including typhoid fever 92, measles 217, scarlet fever 253, diphtheria 264, tuberculosis 1,625. Cases reported: Typhoid fever 457, smallpox 68, measles 13,770, scarlet fever 5,346, diphtheria 2,489, tuberculosis 4,497.

**Auburn.**—Month of April, 1910. Population 40,000. Total number of deaths from all causes, 47, including diphtheria 1, tuberculosis 8. Cases reported: Typhoid fever 1 (imported), measles 3, scarlet fever 22, diphtheria 2, tuberculosis (pulmonary) 2.

**Yonkers.**—Month of February, 1910. Population, 74,897. Total number of deaths from all causes, 88, including typhoid fever 1, scarlet fever 3, diphtheria 5, tuberculosis 7. Cases reported: Typhoid fever 23, measles 10, scarlet fever 43, diphtheria 26, tuberculosis (pulmonary) 19.

Month of March, 1910. Total number of deaths from all causes 101, including typhoid fever 2, scarlet fever 1, diphtheria 6, tuberculosis 3. Cases reported: Typhoid fever 9, measles 12, scarlet fever 63, diphtheria 24, tuberculosis (pulmonary) 39.

Month of April, 1910. Total number of deaths from all causes 81, including scarlet fever 5, diphtheria 1, tuberculosis 14. Cases reported: Typhoid fever 3, measles 33, scarlet fever 62, diphtheria 13, tuberculosis (pulmonary) 15.

**OREGON.**—Month of January, 1910. Population, 505,339. Total number of deaths from all causes 624, including typhoid fever 25, scarlet fever 4, diphtheria 10, tuberculosis 54. Cases reported: Typhoid fever 97, smallpox 36, measles 34, scarlet fever 125, diphtheria 57, tuberculosis 14.

Month of February, 1910. Total number of deaths from all causes 472, including typhoid fever 11, smallpox 1, measles 3, scarlet fever 6, diphtheria 5, tuberculosis 58. Cases reported: Typhoid fever 51, smallpox 29, measles 56, scarlet fever 144, diphtheria 33, tuberculosis 6.

Month of March, 1910. Total number of deaths from all causes 531, including typhoid fever 7, scarlet fever 3, diphtheria 4, tuberculosis 71. Cases reported: Typhoid fever 49, smallpox 29, measles 157, scarlet fever 142, diphtheria 35, tuberculosis 42.

**TEXAS—San Antonio.**—Month of April, 1910. Population, 125,000. Total number of deaths from all causes 197, including typhoid fever 3, tuberculosis 43. Cases reported: Typhoid fever 5, smallpox 2, measles 18, diphtheria 8.

**UTAH—Salt Lake City.**—Month of April, 1910. Population, 85,000. Total number of deaths from all causes 105, including typhoid fever 1, scarlet fever 7, diphtheria 1, tuberculosis 6. Cases reported: Typhoid fever 2, smallpox 19, measles 1, scarlet fever 76, diphtheria 12.

# FOREIGN AND INSULAR.

## ARABIA.

### PLAQUE AT LOHEJA.

The following was received from the Department of State under date of May 25:

A telegram dated May 23 has been received from the consul at Loheja reporting the presence of plague.

## CHINA.

### HONGKONG—Inspection of Vessels.

Passed Assistant Surgeon Foster reports, April 19:

Quarantine restrictions enforced by and against Hongkong remain as reported April 9, 1910.

### INSPECTION AND DISINFECTION OF VESSELS.

*Week ended April 16.*

Vessels granted bills of health.....	9
Total members of crews.....	768
Total cabin passengers.....	389
Total steerage passengers.....	412
Members of crews bathed.....	623
Steerage passengers bathed.....	412
Pieces of baggage disinfected.....	1,030
Vessels disinfected to kill rats.....	0
Crews' quarters disinfected:	
With formaldehyde.....	9
With sulphur.....	0

### SHANGHAI—Inspection of Vessels—Smallpox.

Acting Assistant Surgeon Ransom reports, April 22 and 26:

*Week ended April 16.*

Vessels granted bills of health.....	3
Total members of crews.....	193
Total cabin passengers.....	8
Total steerage passengers.....	0
Members of crews bathed and effects disinfected.....	95
Pieces of baggage disinfected.....	196
Pieces of freight disinfected.....	75
Vessels partially disinfected.....	1

The report of the municipal health officer shows 2 new cases of smallpox among foreigners, and among natives 9 deaths from smallpox.

*Week ended April 23.*

Vessels granted bills of health.....	4
Total members of crews.....	487
Total cabin passengers.....	238
Total steerage passengers.....	374
Members of crews bathed and effects disinfected.....	46

June 3, 1910

Steerage passengers bathed and effects disinfected.....	12
Pieces of baggage disinfected.....	168
Pieces of freight disinfected.....	69
Pieces of freight viséed.....	1,894

There were 10 deaths from smallpox among natives.

#### COSTA RICA.

##### LIMON, FRUIT PORT—INSPECTION OF VESSELS.

Acting Assistant Surgeon Mengis reports:

Week ended May 7. Present estimated population, 10,000.

Bills of health issued as follows:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.
1910. May 4	Vera.....	New Orleans.....	21	.....	.....
4	Verona.....	Mobile.....	23	.....	.....
5	Mount Vernon.....	New Orleans.....	20	.....	.....
5	Città di Milano.....	Porto Rico.....	.....	.....	.....
6	Parismanina.....	New Orleans.....	82	9	19
7	Beatrice.....	Mobile.....	.....	.....	.....

#### CUBA.

##### CIENFUEGOS—INSPECTION OF VESSELS.

Acting Assistant Surgeon Suarez reports, May 19:

Week ended May 14. Vessels inspected, 5. Bills of health issued, 5. No quarantinable disease reported.

#### HABANA—INSPECTION OF VESSELS.

Passed Assistant Surgeon de Valin reports, May 24:

Week ended May 21. Bills of health issued, 25. Vessels inspected, 20. Members of crews of outgoing vessels inspected, 896. Passengers of outgoing vessels inspected, 438.

No quarantinable disease reported.

#### MATANZAS—INSPECTION OF VESSELS.

Acting Assistant Surgeon Nuñez reports, May 23:

Week ended May 21. Bills of health issued to 8 vessels clearing for United States ports.

The department of sanitation reports the inspection of 3,459 houses from May 10 to 20. No quarantinable disease reported.

#### ECUADOR.

##### GUAYAQUIL—PLAQUE AND YELLOW FEVER—INSPECTION OF VESSELS.

Passed Assistant Surgeon Parker reports, May 5:

TWO WEEKS ENDED APRIL 30.

Disease.	Locality.	Pre-viously reported.	New cases.	Cured.	Died.	Remain-ing.
Plague.....	Guayaquil.....	8	9	13	4	.....
Do.....	Milagro.....	1	.....	1	.....	.....
Yellow fever.....	Guayaquil.....	2	13	4	4	7

*Inspection of vessels.*—Week ended April 30. Bills of health issued, 2. Vessels fumigated, 2. Members of crews inspected, 116. Cabin passengers inspected, 41. Steerage passengers inspected, 77. Pieces of baggage fumigated, 78. Pieces of baggage inspected and passed, 44. Certificates for hides issued, 3.

#### GUATEMALA.

##### **PUERTO BARRIOS, Fruit Port—Inspection of Vessels.**

Acting Assistant Surgeon Ames reports:

Present estimated population, 350.

Bills of health issued as follows:

##### WEEK ENDED APRIL 30.

Date.	Vessel.	Destination.	Number of crew.	Passengers from this port.	Passengers in transit.
Apr. 24	Mount Vernon.....	Mobile.....	20	.....	1
25	Heredia.....	New Orleans, via Belize.....	15	15	11
28	Belize.....	Mobile, via Belize.....	19	1	.....
29	Fjell.....	New Orleans, via Belize.....	22	.....	.....

Temperature of all passengers taken.

##### WEEK ENDED MAY 7.

May 2	Cartago.....	New Orleans, via Belize.....	83	19	21
5	Ravn.....	do.....	19	.....	1
6	Agnella.....	do.....	20	.....	.....
7	Director.....	Port in United States.....	64	.....	1

Temperature taken of all on board for New Orleans.

##### WEEK ENDED MAY 14.

May 8	John Wilson.....	Mobile.....	17	.....	12
9	Parismina.....	New Orleans, via Belize.....	82	26	.....
11	Kilsyth.....	New York, via Cuba.....	22	.....	.....
12	Belize.....	Mobile.....	17	.....	.....
13	Fjell.....	New Orleans, via Belize.....	20	2	.....

Temperature of all taken on day of sailing.

#### HAWAII.

The last case of human plague at Honolulu occurred July 17, 1907. The last plague-infected rat was found at Aiea, 9 miles from Honolulu, April 13, 1910.

At Hilo the last case of human plague occurred March 23, 1910. The last plague-infected rat was found at Piihuona, 4 miles from Hilo, April 9, 1910.

Passed Assistant Surgeon Ramus reports, May 9:

#### **HONOLULU—Plague-prevention Work.**

*Week ended May 7, 1910.*

Total rats taken.....	873
Trapped.....	873
Found dead.....	0
Examined bacteriologically .....	756
Plague rats.....	0

June 3, 1910

## Classification of rats trapped:

<i>Mus alexandrinus</i> .....	128
<i>Mus musculus</i> .....	358
<i>Mus norvegicus</i> .....	108
<i>Mus rattus</i> .....	279
Average number of traps set daily.....	1,738

**Smallpox on Steamship Mongolia.**

Doctor Ramus reported, May 7:

The steamship *Mongolia* arrived at Honolulu May 7 with a history of two cases of smallpox which occurred on board during the voyage. One of the cases developed after leaving Hongkong and was taken off at Nagasaki; the other case developed between Kobe and Yokohama. Disinfection was performed at Nagasaki and Yokohama, and all contacts were vaccinated.

On arrival at Honolulu the steerage passengers for the Territory of Hawaii and the patients were taken to the quarantine station, and the usual measures were carried out.

**HONDURAS.****CEIBA, Fruit Port—Inspection of Vessels.**

Acting Assistant Surgeon Carter reports:

Present estimated population, 6,000. Mosquitoes are fairly numerous, chiefly *Anopheles*. *Stegomyia* are present.

Bills of health issued as follows:

## WEEK ENDED APRIL 26.

Date.	Vessel.	Destination.	Crew.	Passengers from this port.	Passengers in transit.
Apr. 21	Orleanian.....	New Orleans.....	24	3	.....
22	Rosina.....	do.....	30	2	.....
